

IIT Bombay - National Entrepreneurship Challenge

E-Cell Track Application

Name: Tarun Kumar Dasari

Team Role: Field Operations & Testing (Student Groundwork)

My Motivation

I believe you can't test a project just by sitting inside a college classroom. My motivation comes from taking our prototype outside campus, testing it in real conditions, and seeing how people actually use it.

Whether it's testing our setup under direct sunlight or getting honest feedback from local vendors, ground testing shows us what's working and what breaks. Doing this groundwork helps our team fix problems early and build something truly useful.

My Expectations from E-Cell

I expect E-Cell to teach us how to conduct field tests systematically. As students, we know how to build a basic model, but we need to learn how to gather proper user feedback and improve our design based on real-world usage.

Through NEC, I hope to learn from experienced founders about running ground operations, talking to early adopters, and making our student project practical for everyday users.
