

National Entrepreneurship Challenge - 2026

IIT Bombay E-Cell Submission

Name: Madiki Rajesh

Team Role: Hardware & Electronics (Student Tinkerer)

My Motivation

My passion is working hands-on with hardware--soldering microcontrollers, connecting sensors on breadboards, and testing circuits in our lab. Last month, I spent hours troubleshooting a loose wire connection on our sensor module, which taught me that building a working prototype takes a lot of patience. A breadboard setup on a lab desk is just the first step.

Working on this student startup isn't about flashy titles for me; it's about the excitement of seeing a circuit board actually work and solve a real problem. I want to keep experimenting, learning from mistakes, and building reliable hardware with our team.

My Expectations from E-Cell

I expect E-Cell to help us move beyond basic breadboard setups. In college labs we learn basic theory, but we rarely learn how to design clean custom PCBs or source affordable electronic components on a tight student budget.

Through NEC, I want to get practical advice from hardware mentors, learn how to design better enclosures for our project, and figure out how student teams can build durable hardware prototypes without overspending.
