

National Entrepreneurship Challenge Submission

IIT Bombay E-Cell

Name: Meera Joshi

Team: Titan - Water Tech & Sustainability

My Motivation

During an environmental audit of residential housing societies in Pune, I discovered that nearly 70% of installed sewage treatment plants (STPs) were turned off or malfunctioning. They failed because traditional biological treatment systems require constant manual monitoring and chemical balancing--tasks that untrained maintenance staff simply couldn't handle.

This inspired me to design automated, sensor-driven bio-reactors that adjust aeration and chemical dosing autonomously. Decentralized wastewater treatment shouldn't fail due to operational complexity; water recycling needs to be reliable, automated, and hassle-free for urban communities.

My Expectations from E-Cell

Selling water treatment hardware to real estate developers and housing societies requires navigating long procurement cycles and building solid maintenance service contracts. I expect E-Cell to help us refine our service-level agreements (SLAs).

NEC will be instrumental in helping us test our business model, learn how to market decentralized utility systems, and pitch to investors who understand urban infrastructure challenges. I look forward to rigorous feedback from industry mentors.
