

National Entrepreneurship Challenge (NEC)

E-Cell, IIT Bombay

Name: Sivarathri Lokesh

Team Role: Software & Firmware (Student Developer)

My Motivation

My motivation comes from writing code that brings our hardware to life. As a student developer, I spend time writing microcontroller firmware, searching forums like Stack Overflow to fix bugs, and creating simple web dashboards for our project data.

Building software for a student startup is exciting because it takes what we learn in computer science classes and applies it to a real project. I want our code to be simple, fast, and reliable so that anyone using our system has a smooth experience.

My Expectations from E-Cell

I am looking to E-Cell for guidance on how to structure software for real-world use. In college assignments, we write code for grades, but here we need to write code that real people can rely on.

I expect NEC to help me learn best practices for hosting our web backend affordably, connecting hardware data smoothly, and turning a student coding project into a functional app under the guidance of tech mentors.
