

National Entrepreneurship Challenge (NEC)

E-Cell, IIT Bombay

Name: Vegiseti Kasi Viswanath

Team Role: Team Leader (Student Project Coordinator)

My Motivation

As an engineering student leading our team, my motivation comes from bringing our project ideas to life in the college lab. I enjoy dividing tasks among team members, organizing late-night work sessions after classes, and making sure our prototype keeps progressing. However, I know my biggest personal hurdle is public speaking and formal presentation. I am much more comfortable building things and organizing work in the workshop than giving speeches in front of an audience.

To me, being a student team leader isn't about standing in the spotlight--it's about staying late to help fix hardware bugs, keeping everyone motivated during exam weeks, and making sure we deliver a working project we can all be proud of.

My Expectations from E-Cell

I expect E-Cell to help me step out of my shell and build confidence in communication. While I can coordinate team tasks and technical work, I want to learn how to present our student project clearly and confidently to judges without getting nervous.

Through NEC, I hope to learn how successful student startups get started, how to manage team responsibilities effectively, and how to turn a college project into something real with proper guidance from mentors.
