

NEC 2026 Submission - E-Cell IIT Bombay

Application File

Name: Kavya Nair

Team: Titan - MedTech & Diagnostics

My Motivation

Volunteering at a rural primary health center in Palghar district opened my eyes to medical diagnostic delays. Patients with suspected anemia or kidney distress often waited over a week for basic blood test reports because samples had to be sent to a central district laboratory. In emergency situations, a week is far too long.

My motivation lies in developing low-cost, paper-based microfluidic test strips that provide immediate colorimetric results without needing electricity or trained lab technicians. Bringing healthcare diagnostics out of centralized urban labs and into rural clinics is what drives my work every single day.

My Expectations from E-Cell

Healthcare startups operate under strict regulatory standards. I expect E-Cell to guide us through CDSCO medical device classification, clinical trial protocols, and ethics committee approvals. Navigating medical compliance as a student team is daunting.

I look forward to connecting with healthcare incubators, medtech founders, and impact investors through NEC. I want to learn how to structure distribution partnerships with public health departments and NGOs to ensure our diagnostic tools reach clinics affordably.
